About Accudata Systems

Having provided PC consulting and integration services to the business and professional community of the Middle Atlantic states since the late 1980s, **Accudata Systems** has evolved as a full service provider offering software and hardware support to our client base. Following the evolution of speech recognition technology, **Accudata Systems** identified the *Dragon NaturallySpeaking* family of products worthy of full-scale integration for our medical, legal, and professional client base. Since the introduction of *NaturallySpeaking* in the summer of 1997, *Scansoft* and a number of third party vendors have continued to enhance and improve upon the recognition accuracy and functionality of the natural dictation process. **Accudata Systems** has continued to evolve with this technology maintaining a knowledge base and working understanding of the various products that are now available to maximize workplace "Hands-free" computing productivity.

CUSTOMER LIST

Accudata Systems, in addition to independent physicians, law firms, and professional organizations, has delivered speech solutions for:
